# set\_switch

The diagram illustrates the internal wiring of the `set_switch` component. A green wire, representing the external connection, is connected to the common terminal of a switch (SW2, TS-1187A-B-A-B). The switch's other terminal is connected to a pull-up resistor (R11, 10k) leading to the +3V3 supply. The switch's wiper terminal is connected to a resistor (R10, 27) and a capacitor (C20, 100nF) leading to GND. The output of the switch is labeled RESE.
